

PACKIASEELAN SOCRETES

Senior Mobile Developer | iOS & Flutter

[\(+91\) 9626449468](tel:+919626449468) · packiaseelan14@gmail.com · <https://packiaseelan.github.io>

PROFESSIONAL SUMMARY

Senior Mobile Developer with 10 years of experience architecting and shipping high-performance iOS and cross-platform applications for fintech, healthcare, and enterprise clients. Deep expertise in Swift, SwiftUI, Flutter, MVVM, and Clean Architecture with a strong track record of reducing authentication failures, accelerating feature delivery, and integrating complex systems such as Stripe payments, HealthKit, and Server-Driven UI. Recognized for owning end-to-end product delivery, mentoring peers, and driving scalable architecture decisions across global teams.

TECHNICAL SKILLS

Languages: Swift, Dart

Frameworks: SwiftUI, UIKit, Flutter

Architecture: MVVM, Clean Architecture, SDUI

APIs & Services: REST, GraphQL, HealthKit, Stripe

Tools: Git, CI/CD, VSCode, Xcode, Android Studio

PROFESSIONAL EXPERIENCE

Senior Associate — Mobile Engineering

Publicis Sapient | July 2021 – Present

Key Clients: Wio Business (fintech), Bupa Blua (digital health), FAB – First Abu Dhabi Bank

- Engineered biometric and multi-factor authentication flows for Wio Business, eliminating **40% of authentication failures** and strengthening platform security for **50,000+ business users**.
- Architected and integrated the Stripe payment gateway, enabling secure, high-volume transactions and supporting rapid onboarding of thousands of merchant accounts.
- Designed and optimized the Invoice and Savings Space modules using MVVM + Clean Architecture, reducing page load times by **~30%** and improving data rendering efficiency.
- Spearheaded the adoption of Server-Driven UI across the Flutter framework, decoupling UI logic from release cycles and enabling product teams to ship UI changes without app updates.
- Built fully reusable loan journey modules as a shared component library, accelerating feature delivery velocity by **25%** and reducing cross-team duplication.
- Delivered HealthKit-integrated habit tracking for Bupa Blua, enabling real-time health data synchronization and powering personalized wellness insights for users.

- Contributed to Flutter Express and RapidX (internal iOS toolkits), standardizing development patterns and cutting new feature scaffolding time by **~40%**.
- Collaborated with design, product, and backend teams across three enterprise-scale projects, leading sprint planning, code reviews, and architecture decisions.

Software Engineer — Mobile Development

DSRC | August 2016 – July 2021 (5 Years)

Key Client: Tranzaura – Fleet Management & Connected Workforce Platform

- Owned end-to-end development and release of iOS and Android applications, managing the full lifecycle from design handoff through App Store and Google Play Store submission.
- Partnered with backend engineers to design and integrate RESTful APIs, improving data sync reliability and reducing API-related crash rates by **~35%**.
- Diagnosed and resolved critical production defects, improving app stability and achieving a sustained crash-free session rate exceeding **99%**.
- Optimized network and rendering performance on the Tranzaura fleet platform, improving real-time asset tracking responsiveness for fleet operators managing **500+ vehicles**.
- Maintained a clean, modular codebase following MVC and later MVVM patterns, enabling rapid feature iteration and reducing regression risk across quarterly releases.

KEY ACHIEVEMENTS

40% reduction in authentication failures by engineering biometric and MFA flows for a **50K+** user fintech platform.

25% faster feature delivery through architecting reusable loan journey component libraries across Flutter projects.

~30% improvement in page load performance by restructuring data-heavy modules with MVVM + Clean Architecture patterns.

Zero-downtime UI releases enabled via Server-Driven UI adoption, eliminating UI hotfixes tied to app store releases.

~35% reduction in API crash rates through collaborative REST API contract design and robust error-handling strategies.

99%+ crash-free session rate maintained across production mobile apps by proactively resolving critical stability issues.

EDUCATION

Master of Computer Applications (MCA)

Kamaraj College, Thoothukudi, Tamil Nadu | June 2014 – May 2016

PERSONAL PROJECT

Selfly – Habit & Focus App (In Development)

Mobile Developer

- Designing and building an iOS-based habit tracking and focus application using SwiftUI
- Integrated **HealthKit** for real-time activity tracking and data synchronization
- Architecting modular components to enable scalable feature development and maintainability
- Built **AI-powered insights and habit recommendations** to improve user engagement
- Designed core engagement features including focus sessions and streak tracking to improve user retention
- Building a production-ready application with scalable architecture
